TRAN HAU (김진호)

WEB DEVELOPER & BRSE (BRIDGE SOFTWARE ENGINEER)

Seoul, South Korea · Soongsil Univ.
onlydev.321@gmail.com
Portfolio: onlydev321.github.io
GitHub: github.com/OnlyDev321

ABOUT ME

Software Engineering student at **Soongsil University** in Seoul, graduating 2027. I build web apps from the design stage to the deploy stage: Figma screens, React and TypeScript on the front, Java or Node.js on the back, and the database in between. I work in **Vietnamese and Korean**, so I can help a client explain the idea and a developer build it without anything getting lost in between. Looking for a role as a **BrSE** or a full-stack web developer.

SKILLS

Frontend:	React, TypeScript, JavaScript, HTML, CSS, Tailwind CSS,
Backend:	Java, Spring Boot, Node.js, Express, REST APIs, WebSockets, MySQL, MongoDB.
AI:	Speech recognition, computer vision, emotion detection, web scraping, OpenAI API.
Other languages:	Python, C++, C.
Design:	Figma, design systems, responsive layout, UI design
Tools:	Git, GitHub, Docker, Postman, VS Code, Vercel, Render.
Languages:	**Vietnamese** (native), **Korean** (fluent, TOPIK 5), **English** (working).

PROJECTS

CampusMatch — university study & team matching platform `github.com/OnlyDev321/campus-match · 2025`

`Next.js · React 19 · TypeScript · Tailwind CSS · Spring Boot · PostgreSQL`

- Connects students for course projects and study groups via campus portal SSO verification.
- Features department/course multi-step filtering, role quotas for balanced teams, and real-time application tracking.

Deepterview v2 — AI video interview analysis `github.com/OnlyDev321/deepterview-v2 · 2025`

`TypeScript · React · Node.js · Tailwind CSS · Computer vision`

- Scores a candidate from their video: emotion, focus, and where in the recording the cues showed up.
- Works on a live call or a saved recording, and exports a report the interviewer can check.

CoffeeAI — voice ordering system `github.com/OnlyDev321/CoffeeAI · 2025`

`Java · Spring Boot · MySQL · REST API · Speech recognition`

- Turns a normal sentence into an order: "large iced latte, less ice, oat milk" becomes a priced order.
- Built the backend as a Java service, so it can sit behind a POS counter later.

Demian-Shop — product scraper `github.com/OnlyDev321/Demian-shop · 2025`

`Python · Layout analysis · Async crawling · JSON export`

- Finds products by where they sit on the page, so it keeps working after a site gets redesigned.
- Output is clean JSON with price and stock already tidied up.

MFC-ChatApp — desktop chat with a word filter `github.com/OnlyDev321/MFC-ChatAppWithoutBadWord · 2024`

`C++ · MFC · Winsock sockets · Multi-threading`

- Chat over raw sockets, with a blocked-word list per person that is checked before a message shows.
- Room manager sees every flagged message.

Portfolio Site — design and build `onlydev321.github.io · 2026`

`React 19 · TypeScript · Tailwind CSS v4 · Framer Motion · Three.js`

- Built the whole site myself, from the design system in Figma to the deploy on GitHub Pages.
- Dark and light mode, a keyboard shortcut palette, and a reduced-motion fallback for accessibility.

Smaller builds — MOJI, TrafficSafe, todoX, Figma-To-HTML `github.com/OnlyDev321 · 2024`

`React · Node.js · WebSockets · Arduino · JavaScript · Figma`

- Real-time web chat, an Arduino crosswalk safety system, a customisable to-do app, and Figma-to-code practice.

EDUCATION

Soongsil University (숭실대학교) — Seoul, South Korea `2023 – 2027`

BSc Software Engineering · Courses include web programming, HCI, UI/UX engineering, and software architecture.

HOW I WORK

Design first, then build, then test, then deploy. I write the spec so both sides agree on what to build, and I keep the code readable enough that the next person can pick it up. See onlydev321.github.io for the full write-up.
